

TELink[®] 700a

Nei-Tech Labs Digital Messaging System

The TELink[®] 700a is a professional-quality telephone-loadable messaging system utilizing audio storage and playback. The 700a provides a single continuous-loop message into any phone system's MOH port. The TELink comes standard with 32 minutes of non-volatile high-density flash memory, it offers a wealth of standard features including fax-line sharing, voice-line sharing, and distinctive ring compatibility. A night answer model is also available to answer the phone after business hours and play a separate night message for callers.

All remote unit management and audio downloads are accomplished by your dealer using a WinLink[™] Communications Appliance (WCA), and the WinLink controller software suite. When a download is needed, the WCA dials the remote TELink unit and transfers audio and unit configuration settings over standard phone lines. TELink's integrated Call-Back[™] feature combined with WinLink's powerful scheduling abilities provide great flexibility and convenience in loading units and managing the customer base. Loads can be initiated on

demand, scheduled for a specific date and time, or remote units can be scheduled to call the controller at a future date and time and automatically load new audio.

The TELink 700a features:

- 32 minutes of flash memory at 69Kbps
- Supported sample rates up to 92Kbps
- Fax-Share capability
- International ring cadence compatible
- Remote and on-site digital volume control
- Separate 8Ω and 1KΩ RCA outputs
- LED status indicator
- 5-year parts and labor warranty
- Manufactured in the USA

Each TELink 700a is built to exacting quality standards using state-of-the-art assembly equipment for outstanding reliability and years of dependable service.
